# Sharp Welcome Kiosk

## Employee and visitor access management solution for a more efficient workplace

Welcoming and hosting visitors to your premises can be a time consuming manual process that demands resources that most businesses simply do not have.

It doesn't need to be this way.

Imagine a digital system designed to fully automate your visitor welcome process. Capable of so much more than simply signing guests in and out, the Sharp Welcome Kiosk is a flexible all-in-one visitor management system that uses NEC's world-leading facial recognition technology as the key to smooth and speedy visitor access.

Ensure all guests comply with your company's health and safety regulations, gather and store records of who is on site at all times, get instant notifications when a new guest arrives on site, and effectively remove any manual sign in processes to free up staff time.

### Common Challenges

- 1 Ensure premises are safe
- 2 Identify elevated temperatures
- 3 Deploy contactless solutions
- 4 Identify and validate individuals
- 5 Streamline contact tracing
- 6 Provide personalised service

# Design your visitor experience with powerful, precise technology

## How does it work?

When your employee or visitor arrives at the kiosk, they will be asked to register if it's their first time - or welcomed by their name if already registered. If the touch-screen is used, the kiosk's UV-C screen sanitiser operates to provide clinical grade sterilisation. The optional integrated temperature sensor can also screen visitors if required.

This highly configurable solution can trigger additional elements such as a personalised greeting for pre-registered or returning visitors, label printing, providing meeting details, sending a notification SMS to a host or commencing on-site induction training.

There are other significant benefits for operators, including greater streamlining with repeat customer interactions, more efficient use of staff, and reporting and analytics for contact

## Features include

- Facial Recognition
- Infrared Temperature Sensor
- Visitor Registration
- Access Control\*
- Contactless Access
- UV-C Screen Sanitiser
- Integrated Barcode Scanner
- Process Automation
- Site Induction Automation
- Reporting / Usage Statistics
- Personalised Experience
- Configurable Solution
- Visitor Label Printing

\*Optional feature. Additional hardware and costs may apply.

# Benefits

---

## Improved Safety

People seeking access to the premises are required to have their temperature checked. Contactless access is available but if the touch-screen is required the kiosk's UV screen sanitiser operates to provide clinical grade sterilisation. Operators can also maintain a full record of patrons for contact tracing or use during evacuation in the event of an emergency.

---

## Improved Security

Access control and data security are critical. Biometrics is much more secure than traditional authentication methods. You cannot steal, forget or have your face stolen and hacking is extremely difficult as biometrics hashed templates are created - facial images are not used for matching. The optional NEC Liveness camera technology detects depth and ensures that still images cannot be used. All visitor details are securely stored by the solution and not a third party cloud service.

---

## Improved Business Efficiency

A flexible site induction feature can ensure visitors are informed of important site information and meet OH&S requirements. Visitor verification can trigger configurable elements such as sending an SMS notification to a host and printing visitor labels. Information to support contact tracing is recorded. Pre-enrolment and bulk upload capability enable operators to manage large quantities of visitors and utilise employees efficiently.

---

## Improved Visitor Experience

Visitors can save time by self-enrolling on their own device and receive a personalised greeting on arrival. Return visits are quick and seamless as details are already in the system. In busy environments, one or more Welcome devices can reduce or remove queues waiting to sign into visitor books or waiting to talk to someone. The solution can link to loyalty programmes, encouraging repeat business.

## Features

### Visitor interaction

Registered visitors receive a personalised welcome with options such as host look-up, visitor label printing, site induction automation and can even be shown targeted advertising amongst other things. The Welcome devices can run and interact with any other Windows program or web-based service for seamless automation.

### Access control

Sharp Welcome Kiosk can integrate with door opening, speed gates or building management systems\* to allow employees, visitors or VIPs, to be provided secure access using their face. Separate tablet devices can be installed on each door, offering priority access to staff and visitors, removing any need to touch access buttons or keypads.

### Host notification

Send SMS\* or email notifications to a host, alerting them that their visitor has arrived. This enables staff to attend to their visitor regardless of whether they are early, on time or late. A photo can be included, which adds value for VIPs or visitors on a watch list.

### Advanced Reporting

The Sharp Welcome Kiosk is fully equipped to provide you with greater visibility on who is on site and when. Contact information and visitor audit data are captured to provide valuable business insight or track staff and contractor sign in/out times.

### Centralised matching

Multiple Welcome devices can share the same face recognition matching engine, allowing registered visitors and employees to be recognised across locations. This is particularly useful where customers or staff frequent multi-site organisations.

### Systems integration

Add value by integrating with other IT systems e.g. calendaring, booking systems, customer relationship management, visitor management, and point of sale systems.

\*Optional feature. Additional hardware and costs may apply.

Imagine having full visibility of what time staff started and finished their shift. Having assurity that your guest's temperature has been checked and verified prior to access being granted. Knowing that all contractors on site have completed your unique induction process and submitted a health and safety assessment prior to stepping foot into your building or site.

Luckily for you, there is technology available to make this a reality. Find out why thousands of Kiwi businesses are turning to digitised visitor management systems to automate their guest registration - and begin your journey today.

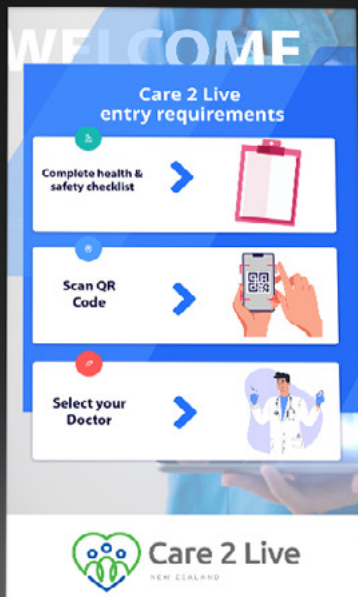

# Create a solution that works for your visitors, employees and contractors

Give visitors the tools for easy access to your premises

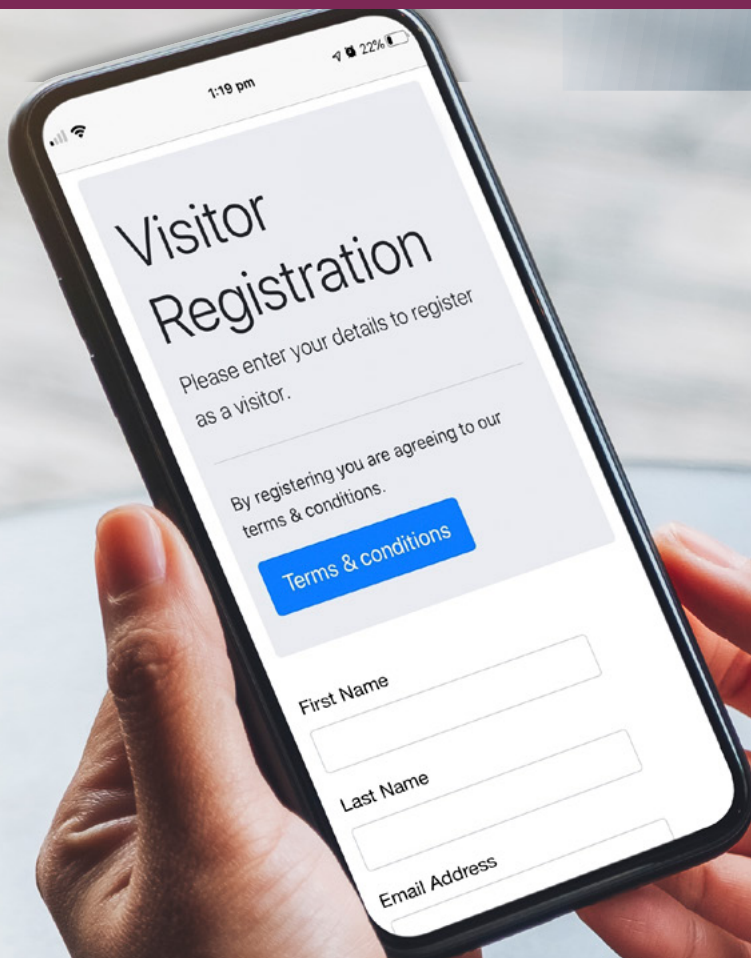

Get better visibility of your staff's whereabouts

Grant contractors a more efficient onboarding process

# Visitors can self-enrol for a quick and safe contactless experience
